Agiloft Contract Lifecyle Management (CLM)

AI on the Inside

Agiloft's award-winning CLM platform streamlines contract processes, sourcing, and supplier information management; from source to contract. Its no-code, fully configurable system lets non-technical users manage contracts and supplier data easily.

Agiloft's core platform has AI woven into every step of a contract's lifecycle, delivering on the promise of accelerating your business velocity, uncovering hidden risks, and driving instantaneous approval cycles. Agiloft's AI capabilities are completely in your control, whether, or how you choose to use them.

Key features include customisable workflows, AI-powered analysis, and integration with CRM, ERP, and procurement tools. Agiloft accelerates collaboration and turns contract data into a strategic business asset—driving efficiency and competitive advantage.

AI your way
AI is available at every step of the contract lifecycle. Whether it's pre-built prompts, or ones you create yourselves for your unique business needs, or simple tagging and extraction to make your contract review and creation speed by, Agiloft provides you with the agility to use AI functions that provide competitive advantages to your organisation.

Screens Contract Review
Use expert-crafted playbooks to assess contracts against pre-defined standards and provide editable redline suggestions, accelerating the review process and firmly embedding best practices.

AI agents at every step
Create summaries, compare clauses, highlight red flags, and more with pre-built prompts. Or build your own prompts that allow you to do with the platform what's best for your users and your business. The possibilities are practically endless!

What it does

1. Draft
Set uniform language and standards by utilising conditional templates and a clause library for new contracts.

2. Review
Review contracts quickly, accurately, and consistently. Review dozens or thousands at a time for risk and standards adherence.

3. Negotiate
Identify non-standard third-party language, compare language to market standards, and generate non-confrontational redlines at the click of a button.

4. Sign
Route contracts to the appropriate signers based on standardised assessments, without manual review.

5. Share
Utilise role-based permissions to ensure only authorised users are allowed certain actions.

6. Find
Use natural Language Processing (NLP) to find specific clauses or terms instantly.

7. Learn
Find patterns and trends across contracts to identify common risks and opportunities.

8. Consult
Reference practice-specific playbooks written by experts.

What it solves

✓ **Delays from manual review**
With the combination of generative AI and a human check, the speed of business increases exponentially.

✓ **Siloed expertise**
With the ability to compare language to expert playbooks and your own clause library with suggestions for improvement, expertise is now ubiquitous.

✓ **Risk of unapproved language**
With standardisation and identification of potential risks earlier in the contract lifecycle, your risk levels immediately decline.

✓ **Long contract lifecycles**
The more efficient contract review and negotiation is, the faster the time to revenue or business production.

GLOBALLY TRUSTED.
WITH AI ON THE INSIDE™.
